**The Service
Warranty module
addresses repair
and service shop
business issues
within distributor
operations.**

| distribution essentials

The Service Warranty module addresses repair and service shop business issues within distributor operations. It handles maintenance or repair of customer products that require either billable or warranty service work. Upon inspection, a work order might involve warranty work, billable work, and internally charged work, or any combination of the three. Service Warranty handles the entire cycle of shop activities, from necessary shop parts and labor, to vendor claims, customer billings, and write off of internal parts and labor; a valuable tool for any customer performing these types of service-related functions.

Features Include:

- Service Repair Orders (SROs)
 - product repairs/maintenance
 - new product setups, SROs generated automatically from sales, product assemblies, purchased upgrades
- Inventory control of shop/truck parts
- Shop-specific G/L accounting
- Flexible pricing and billing
 - standard customer pricing for billable work
 - vendor rates for warranty work
 - internal work at cost
- Resource scheduling
 - scheduling by SRO stages
 - item pick-up tracking/queue
 - item delivery tracking/queue
